Origin of the Curse — Server #75 Battle Brief

Opponents: #85 · #91 · #76 | Prepared 10 Nov 2026 from lastasylum.gg leaderboards (top 100 by power, hero might and kills) and the wiki event page

The one thing to know: the first earthquake hits **our own Royal City (#75)**. By the in-game countdown, **Round 1 starts around Fri 14 Nov, ~03:10 Berlin time** — that is **~11:10 in Korea/Japan**, prime time for #85 and #91, and the middle of the night for us and #76. **Round 2 follows ~11 h 50 min after Round 1 ends (~15:30 Berlin, Fri)** at a server revealed after Round 1. Check the exact times in-game (Event rules → local time).

1. How the event scores (60-second version)

- Points = **Cursed Potions**. Your Sanctuary standing in the zone earns **40/s = 72,000 per round** with zero effort.
- Gathering points (≈1 min each): **Healing Kit** 2,700 total (allowed under shield) · **Beast Bone** ~6,300 + **30/s** while you hold it · **Runestone** ~15,600 + **120/s** while you hold it. Bones/Runestones remove your shield.
- An early Runestone is everything: one gathered at minute 2–4 is worth ~200,000 by the end of the round; each minute of delay costs ~7,200.
- **Red circle (0–100 tiles):** no shields; only red-circle Sanctuaries can gather/scout red-circle points. **Yellow circle (101–150):** shields allowed.
- **Artifacts are lost** if you shield, if you leave the zone, or if someone beats your Sanctuary. **Earned potions are never lost.** Enemy players can also hit your march on a point and take it.
- Chests use the **total of both rounds** (15k / 30k / 60k / 100k … up to 600k). Rankings use your **best single round**.

Floor for everyone: just sitting in the zone for both full rounds = 144,000 potions = the first four chests, with no fighting at all.

2. Opponent overview

Server	Power top 100	Hero might top 100	Hero avg top 10	Hero #50	≥75M hero	Kills top 10	Main alliances (alliance power)	Threat
#85 (Korean core)	12.9B	**6.91B**	94.9M	67.0M	19	167M	DESA 7.8B · NEX 6.4B · 9to6 6.3B · KDCE 6.2B · EBRR 6.0B	VERY HIGH
#75 (us)	11.5B	**6.54B**	93.3M	61.3M	20	104M	WPP 9.7B · HoG 7.7B · NEXT 6.7B · ĚØN 4.7B · AURA 3.9B	US
#91 (Japanese/mixed)	11.6B	6.20B	86.2M	59.3M	11	122M	HERA 8.5B · RAV 6.9B · ASVA 6.1B · CGR1 4.4B · PPL 4.2B	MEDIUM
#76 (EU)	10.6B	5.84B	80.3M	56.8M	10	99M	NTX 7.3B · WSH 6.2B · EoC 6.2B · STLY 5.0B · ShW 3.8B	LOW

Hero might is the better guide to who wins a fight; power also counts buildings and research. On hero might **we rank 2nd of 4** — ahead of #91, which looks our equal on power.

#85 Strongest server — the gap is depth

Ahead on every measure, but on hero might their top 10 (avg 94.9M) is barely above ours (93.3M). The real gap is behind that: their #50 has 67M hero might (ours 61M), every one of their top 100 has 56.6M+, and they carry the most kills, led by one extreme hitter. Round 1 is their lunch hour.

Read: our top heroes can stand next to theirs; our mid-range can't. Avoid their Sanctuaries, take their marches on points only when you clearly outsize the march.

#91 Big power, lighter heroes

Equal to us on power, but clearly behind on hero might (6.20B vs 6.54B): only 11 players at 75M+ hero (we have 20) and 29 of their top 100 under 55M. HERA (Jeer 105.8M) is the force; RAV / ASVA / CGR1 behind it mostly have 55–70M heroes. Round 1 is their prime time.

Read: beatable outside HERA's top 5. Their second line is a target, not a threat.

#76 The softest target — and we know them

We beat #76 in KvK on 26 Sep and 31 Oct. Weakest heroes in the group: nobody at 90M+, 45 of their top 100 under 55M. Their whale WhereAreMyPills (174M power) has only 81.7M hero might — softer than he looks. Their real fighters are JustAri (87.5M) and PH4NTOM (86.3M).

Read: their Sanctuaries holding artifacts are our primary prey. #85/#91 will hunt them too — get there first.

#75 Where we stand

2nd on hero might, with the **strongest single hero roster in the group**: ArchaicKaspa (WPP) 117.6M, ahead of 탱구리 (112.1M). Three of us are at 100M+ (ArchaicKaspa, جحيم, Anjutka) — #85 has two, #91 one, #76 none. Our edges: home ground and **Round 2 timing** (Friday afternoon EU).

Read: survive Round 1 cheaply, win Round 2 — rankings only count the best round.

3. Watch list — who to stay away from

Ranked by danger: hero might first, then power and proven kills (kills are lifetime totals). If one of these is next to you and you hold artifacts, **move or call for reinforcements before they hit**.

#	Player	Server · Alliance	Hero might	Power	Kills	Why
1	**탱구리**	#85 · NEX	**112.1M**	**216.7M**	27.9M	Strongest opponent on every measure, and fights
2	**OGU리**	#85 · 9to6	90.3M	170.9M	**45.4M**	Biggest killer in all four servers — almost twice the next player
3	**블루스BlueS**	#85 · NEX	107.1M	203.8M	16.2M	Second NEX whale
4	**Jeer**	#91 · HERA	105.8M	214.8M	19.1M	#91's only 100M+ hero player and their top killer
5	**옥소리**	#85 · KDCE	99.9M	209.5M	9.9M	Huge, less aggressive
6	**WitchWendy**	#85 · 9to6	97.3M	152.3M	5.0M	Heroes far above her power — #85's 4th-best hero roster
7	**Doctor37shxubdnc**	#85 · no tag	93.2M	194.2M	18.1M	Untagged lone wolf: can hit anyone
8	**Skrow** · **AUAMC**	#91 · HERA / RAV	93.5M each	151 / 168M	9.6M / –	#91's next-strongest heroes after Jeer
9	**LucidDream**	#85 · 9to6	91.3M	127.6M	15.4M	Hitter far above his power — heroes confirm it
10	**JustAri** · **PH4NTOM**	#76 · NTX / STLY	87.5 / 86.3M	126 / 108M	13.4 / 16.0M	#76's real fighters — strongest heroes and most kills there

Also strong heroes on #85: 닥터WHO (87.9M), Klappi (85.2M), AtlasSage (85.1M), 리오내 (82.2M). #91: Daddy[shark] (89.6M), Obsidious (88.7M). Kill specialists with modest heroes — dangerous mainly to smaller accounts: -Farewell- (#91, 18.6M kills, 60.1M hero), Radahn (#91, 14.8M kills, 56.7M hero).

4. Focus targets — who to hit

> **Rule:** we fight for **artifacts**, not kills. Every attack should either take a Runestone/Bone out of an enemy Sanctuary or steal a point from an enemy march. Scout first — scouting shows how many artifacts a Sanctuary holds. **Compare hero might, not power**, before you hit.

1. **Enemy marches sitting on Runestones.** Highest value, lowest risk: you take the point and its potions, and a gathering march is often lighter than the owner's home defence. Applies to all three servers.
2. **#76 Sanctuaries holding artifacts** — NTX, EoC, STLY, WSH players with 50–70M hero might. Most of our core outsizes them. Primary target in both rounds.
3. **#91 second line holding artifacts** — RAV, ASVA, CGR1, SK48, PPL players with 55–70M hero might. Avoid HERA's top 5.
4. **#85 only opportunistically** — single marches on points where you clearly outsize them. Never their Sanctuaries unless several of us hit a confirmed artifact-holder together.

5. Brackets across all four servers (hero might, top 100 of each)

Bracket	#85	#91	#76	#75 (us)	What it means for us
Elite ≥90M	7	3	0	4	Our four (ArchaicKaspa, جحيم, Anjutka, Voodooya) can stand next to anyone. Everyone else avoids #85's seven.
Heavy 75–90M	12	8	10	16	We have the most players here. Even with #85, ahead of #91 and #76.
Core 65–75M	37	19	12	15	**#85's real advantage — depth.** Their 37 vs our 15. Our core beats most of #76 and #91 here.
Field 55–65M	44	41	33	48	Even fights vs #91 and #76; lose vs #85 (their weakest top-100 player has 56.6M).
Light under 55M	0	29	45	17	#76's and #91's tails are soft. Everyone below our top 100 is in this group too.

By power the picture is harsher: players at 120M+ are #85 58 · #91 32 · #75 21 · #76 9. Hero might shows our top end is much closer to #85 than power suggests.

6. Strategy by strength

Use whichever number fits you — power and hero might (Profile → Heroes) line up roughly like this on #75. If your hero might puts you a bracket higher than your power, play the higher bracket.

Whales — 140M+ power · 85M+ hero might

- **Red circle near the throne**, next to another #75 whale. Never alone.
- Free every march; send them at Runestones from **second 10**. Goal: 2–3 Runestones by minute 10.
- No shield, never leave the zone. Strong troops stay home; heal between hits.
- Don't chase kills. Your job is to hold Runestones until the bell.
- If one of #85's top 5 (hero might 97M+) parks next to you: relocate early (1 free move per 5 min inside the zone) — don't wait to be hit.

Core — 115–140M · 65–85M hero might

- **Red circle, beside a whale** — you are their bodyguard and hunter.
- Beast Bones early; Runestones when one drops close.
- Keep one march free to **snipe enemy marches on Runestones** and to hit scouted #76 / #91-second-line Sanctuaries with artifacts.
- Reinforce allied whales when they're attacked.

Field — 100–115M · 55–65M hero might

- **Inner edge of the yellow circle** (around 101–120 tiles), in a group of #75 players.
- Bones and Healing Kits nearby; points spawn in both circles every 30 s and a big drop comes every 3 min (10-second warning) — keep a march ready for it.
- Hit #76 marches on points; leave #85 alone.
- Threatened while holding bones? Calculate: if the attacker clearly outsizes you, shielding (losing the bones) beats losing troops *and* bones.

Developing — under 100M · under 55M hero

- **Yellow circle, shield up, stay all 30 minutes.** That alone is 72,000 per round.
- Gather **Healing Kits only** — allowed under shield. Don't touch Bones/Runestones (they drop your shield).
- Two full rounds = 144,000+ → first four chests, zero risk.
- Every #75 player in the zone also helps our alliance ranking.

7. Round plan

When	What
Round 1 · Fri ~03:10 Berlin at our Royal City · KR/JP prime time	**Survive cheaply.** Night owls play per their bracket above, grouped near the city. Everyone else: if you can't be online, make sure your troops are healed and don't leave artifacts unguarded. #85 and #91 will be at full strength — expect them to hunt anyone holding Runestones, including #76. Bank presence points and Healing Kits; don't fight #85 at 3 am.
Between rounds	Check the event page for the Round 2 location and opponents. Heal everything. Post who scored what and who hit us in alliance chat.
Round 2 · Fri ~15:30 Berlin location revealed after R1 · EU afternoon, ~23:30 KR/JP	**Our ranking round — full turnout.** Relocate in before the first wave (free from outside the zone, any free tile, only while that round runs). Whales and core straight into the red circle on Runestones; field and developing per bracket. Rankings only count the best round, so one strong Round 2 is worth more than two average rounds.

8. Checklist before each round

- All troops healed · **all marches free** (no gathering/rallies elsewhere) · a cheap single-hero march ready for Healing Kits.
- Direct Relocate items on hand (they work during the 5-minute free-move cooldown).
- Know your bracket and your buddy (whale ⇄ core). Agree in alliance chat who goes red, who stays yellow.
- Remember: shield = artifacts gone; leaving the zone = artifacts gone; potions you've earned are always safe.
- Last 3 minutes: only start gathers that will finish before the bell.

Sources: lastasylum.gg server leaderboards (#75, #76, #85, #91 — players by power, hero might rank, players by kills, alliances by power), read 10 Nov 2026; wiki-last-asylum.com "Origin of the Curse" (update of 23 Oct). Kill figures are lifetime totals, not per-event. Round times are estimated from the in-game countdown on 10 Nov 20:57 Berlin — confirm in-game. Shield/relocation rules as stated by the wiki; "how many artifacts one raid takes" is not yet known.
